

SUSTAINABLE DEVELOPMENT POLICY

At Katanga Mining our goal is to create long-term value through the ethical and responsible extraction of mineral resources and production of metals. We work in cooperation with all stakeholders and believe in transparency and accountability in all our activities.

Our approach to health & safety, the environment and the community is integral to the way we do business and central to our license to operate. In all of our activities we will strive to:

Governance: Uphold ethical business practices and employ management systems which continually assess risks and identify appropriate mitigation strategies.

Health & Safety: Ensure the health and safety of our employees, contractors and host communities is not compromised through our activities. Wherever possible, we will seek to improve their health and well-being through defined programmes.

Environment: Minimize to the greatest possible extent adverse effects of our operations on the environment. We will strive to continually improve our environmental systems and procedures.

Employment: Provide a work environment in which everyone is treated fairly and in which they are given the opportunity to realise their full potential.

Human Rights: Uphold universally recognized human rights within our sphere of influence, treating people with fairness, dignity and respect.

Community: Engage openly and actively with local communities to understand their views and work in partnership with them to create sustainable livelihoods through employment and community and social development programmes, yielding long-term improvements to living standards.

Transparency: Produce objective public reports which review our performance and demonstrate our progress against sustainable development targets.
